Susie -- EPA has reviewed the core visuals from the past subsurface sampling event at East Waterway. The additional analysis proposed is consistent with our meeting on May 17th. Revisions to sample SC58 are also acceptable to EPA.

EWG can submit the samples for further analysis. EPA is currently comparing the revised core visuals to the preliminary data tables. From that review, should any additional discrepancies arise that would result in additional core intervals being analyzed, EPA reserves the right to require additional analyses.

EPA also expects that the additional core analysis will be included into the draft subsurface data report.

Should you have any questions, please feel free to give me a call.

regards,

Ravi

Subject: Revised core visuals

I have revised the core visuals based on our meeting on Monday. I will revise the memo to reflect these changes. We would like to start these analyses as soon as possible so I need an e-mail from EPA approving the proposed analyses in order to get the lab started.

Thanks.
Susie

Additional analyses

1. DDT was added as an analyte for SC11 (4-6ft).
2. PCBs were added as an analyte for: SC18 (6-8ft), SC29 (9.8-11.7ft), and SC40 (4-6.8ft)
3. Metals were added to SC54 (8-9.2ft).
4. For SC58 the 6-8ft interval will be analyzed for PAHs rather than SVOCs because only PAHs were an issue in the 2-4ft interval.[attachment "EW 2010 subsurface core visuals.xlsx" deleted by Ravi Sanga/R10/USEPA/US]
